“We moved our headquarters to Cuyahoga Heights two years ago and now have a facility with plenty of room to grow our business. Having quick access to I-77 and I-480 was also a key factor in our decision to relocate here. We love our new home and really enjoy showing off Cleveland when any of our international customers are in town for a visit.” — Bill Adler, President

Founded in 1946, Stripmatic Products Inc. was originally located in Cleveland’s Tremont area. In July of 2011, the company moved its operations to Grant Avenue across the street from the Cuyahoga Heights police and fire stations. Stripmatic completely renovated an existing 60,000 square foot facility with new lighting, air, electrical service, two crane systems and a complete build out of the office space to satisfy current needs as well as to accommodate for planned growth. We currently have 30 employees.

Who We Are and What We Provide

Stripmatic Products supplies high-quality, split-seam bushings, spacers and tubular parts to various industries. The two major markets we currently serve are the automotive and heavy truck industry. In the automotive markets our parts are used in chassis, frames, suspension bushings and seat frames. In the heavy truck market our parts are used mainly on the axles “spider” assembly and suspension systems. Wrapped bushings also have applications in conveyor chain systems, appliances, lawn and garden implements and agricultural equipment.

Stripmatic produces metal tubular shapes formed in a unique die process in stamping presses. We also engineer customized metal processing capabilities to develop close tolerance outside diameters, exceptional roundness and length tolerances as well as numerous added-value features such as machined or rolled edge chamfers, pierced holes, notches, welded seams and embossed patterns.

Stripmatic has over 60 years of “split-seam” fabrication experience from which we have developed the equipment and processes to maintain the highest level of diameter and length control in the industry. These parts offer a customer improved tolerances and cost savings when they convert from cut-off tubing or machined parts. Our customized end-finishing machines will develop length tolerances of +/- .004”.

Growing Internationally

Stripmatic Products is a TS-16949 System Certified supplier of precision stamped metal bushings, anchor pins, dowel pins, spacers, sleeves and custom designed parts for automotive and heavy truck markets worldwide, as well as, a provider of products and services to a wide range of other market applications.

We continue to grow and adapt to changing domestic and international market needs with ongoing refinements to our manufacturing processes in order to provide components that meet or exceed the most stringent quality requirements as a lower cost option to cut tubes. Stripmatic not only supplies the tightest tolerance tubular parts in our industry, but will also perform "added value" assembly to help our customers reduce their labor and overhead costs.

We currently have a full plate of R&D projects focused on expanding our size capability as well as seam welding and other potential added value operations.

A Management Team Success Story

Bill and Liz Adler purchased Stripmatic Products in February of 1992. They established a management team that was given the responsibility of redefining the company and establishing strategic objectives. As a result, the marketing focus has evolved into serving those customers and applications for which we can offer the maximum added value. These efforts, coupled with an employee based Continuous Improvement Program, have increased sales per employee since 1992 by 230%.

Stripmatic Continues to Make News

Two major trade publications recently featured Stripmatic Products in articles highlighted the company's involvement and interest in promoting quality practices throughout our industry.
